different HTML styles

swipe

@lathee_codes

Styles in HTML are basically rules that describe how a document will be presented in a browser.

HTML styles implemented in 3 ways

CODING | C++ | PYTHON | DEV
@lathee_codes

1. Inline style

style attribute is used inside the HTML start tag.

2. Embedded style

style element is used inside the <head> element of the document.

3. External style

the <link> element is used to point to an external CSS file.

CODING | C++ | PYTHON | DEV
@lathee_codes

Inline style

```
<!DOCTYPE html>
<html>
<head><\head>
<body>
<h1 style="color:blue; font-size:25px">
example of head <\h2>
<\body>
<\html>
```

CODING | C++ | PYTHON | DEV
@lathee_codes

Embedded style

```
<!DOCTYPE html>
<html>
<head>
<style>
h1{
color: blue;
font-size: 25px;
}
<\style>
<title><\title>
<\head>
<body>
<h1 >example of head <\h2>
<\body>
<\html>
```

CODING | C++ | PYTHON | DEV
@lathee_codes

External style

```
<!DOCTYPE html>
<html>
<head>
<link rel="stylesheet"
      type="text/css"
      href="/html/css/externalstyle.css">
<title><\title>
<\head>
<body>
<h1”>example of head <\h2>
<\body>
<\html>
```
